SUMMARY

Computer Engineering Student at Bahirdar University focus on | CCNA & SRWE Certified | |Huawei eNSP|Full-Stack Web Developer.
Hello! I'm Haymanot Andarg, a tech enthusiast dedicated to mastering the intersection of network infrastructure and software development.
Core Competencies:
Networking: Proficient in Cisco IOS and Huawei VRP (eNSP). Certified in CCNA and Switching, Routing, and Wireless Essentials (SRWE).

EDUCATION

From 2013 to 2028
Bahir Dar, Ethiopia

Bahir Dar University (BiT), Bahir Dar, Ethiopia
Bachelor of Science in Computer Engineering
- Focus on Software Development & Web Technologies
- Networking in cisco and huawei

From 2018 to 2022
Debre Markos Ethiopia

High School Diploma
Ethio-Japan General Secondary and Preparatory School
- Achieved a perfect academic transcript score.

PROFESSIONAL EXPERIENCE

October 2025 – February 2026

Full-Stack Software Developer
Bahir Dar University — Online/Digital Notice Board System
- Developed a full-stack complaint management platform using **Java Spring Boot, React, TypeScript, MySQL, and JPA** for students, faculty, and administrators.
- Implemented **JWT authentication and role-based access control (RBAC)** across three user portals.
- Designed relational database schemas and optimized persistence workflows for complaint and ticket management.

February 2026 – Present

Networking configuration in cisco and Huawei
Bahir Dar University
Bahir Dar University Data Center Network is a network infrastructure project in which I configured and managed the data center using Cisco and Huawei equipment, setting up VLANs, inter-VLAN routing, and [OSPF / static routing, replace with your actual ones] with security measures such as [ACLs / port security / SSH, replace with your actual ones]. I also tested connectivity and troubleshot issues for stable, secure performance, strengthening my skills in network design, multi-vendor configuration, and troubleshooting.

PROJECTS

March 2026 – Present

Ethio-Japan General Secondary and Preparatory School Portal System

Ethio-Japan General Secondary and Preparatory School Portal System is a scalable web-based school portal I designed and developed to serve 4,000 to 8,000+ students and support over 4,000 concurrent users during peak periods such as result releases and registration. It centralizes student records, schedules, grades, announcements, and communication between students, teachers, parents, and administrators, with secure authentication and role-based access to protect sensitive data.

October 2025 – February 2025

Bahir Dar University Online Notice Board System

Java Spring Boot, TypeScript, React, MySQL, JWT

Online Notice Board System is a full-stack web application I developed to replace paper notice boards, letting administrators post, update, and delete announcements that users can view instantly from any device. I built the backend with Java Spring Boot, providing secure REST APIs with JWT authentication and role-based access for admins and users.

October 2024 – Juanuary 2024

Hotel Manegement System

Hotel Management System is a full-stack web application I developed to help hotels manage room bookings, guest records, check-in and check-out, and billing from one platform. I built the frontend with HTML, CSS, and JavaScript to create a responsive, user-friendly interface, and the backend with PHP to handle business logic, user authentication, and server-side processing. I used MySQL to design and manage the database that securely stores rooms, customers, reservations, and payments. Through this project I strengthened my skills in full-stack development, database design, and CRUD operations, and learned how to connect a frontend, backend, and database into one complete working system.

July 2026 – August 2026

Freshman Student Mini App Telegram Bot

Freshman-bot is a chatbot I built to help first-year university students settle into campus life by answering common questions about academic resources, schedules, and campus services. I developed it using [Python / Telegram Bot API, replace with your actual tools], designing the conversation flow and commands so students get quick, reliable answers in one place. Through this project I strengthened my skills in [API integration, bot logic, and Git/GitHub version control]. The code is public at github.com/Hayme19/Freshman-bot, with over 16 commits made while building and refining its feature.

SKILLS

Languages

- Python
- JavaScript
- TypeScript
- Java
- HTML5 / CSS3
- SQL

Web & Backend

- React.js / React Flow
- Tailwind CSS / Bootstrap
- Node.js / Express
- FastAPI
- Spring Boot
- REST API Design

Data Science & AI

- Pandas & NumPy
- Scikit-learn
- NetworkX

Tools & Databases

- Git / GitHub
- MySQL / MongoDB
- PostgreSQL
- Postman
- VS Code / IntelliJ
- Web3.js / Ethers.js

CERTIFICATES

- CCNA: Switching, Routing, and Wireless Essentials
- Introduction to Computer Networking — Simplilearn
- Huawei:Datacom-HCIA
- Data Science Fundamentals
- CCNA:Introduction to Networking — Cisco

LANGUAGES

Amharic — Native

English — Professional Working Proficiency
